MR BENG — AI DEALERSHIP CONCEPT · SCRIPTED DEMO · NO LIVE INTEGRATIONS

One conversation. Clear ownership.

A proposed journey for a used-car dealership, with people in control.

01

Attract & qualify

From an advert to a relevant shortlist.

CUSTOMER CHANNEL

New enquiry

Customer responds to a sample advert in a WhatsApp-style conversation.

Source + permission to continue

↓

SALES AGENT

Understand the need

Ask about vehicle type, budget and timing. Suggest a shortlist from approved stock data.

Preferences + vehicle interest

Missing information?

Ask one useful question. Never guess affordability, availability or price.

02

Prepare & hand over

Give staff the context, not another blank lead.

FINANCE ENQUIRY AGENT

Collect preferences

If the customer asks about finance, collect their stated budget and preferred term. No eligibility decision.

Enquiry summary, not a loan offer

↓

HUMAN CHECKPOINT

Staff verify & respond

A salesperson checks stock, confirms pricing and arranges finance advice through the authorised process.

Named staff owner + next action

"I want to speak to someone."

Skip automated qualification and route to a person. If unavailable, queue for follow-up without promising a response time.

03

Visit & follow up

Make the next step visible to everyone.

SALES TEAM

Arrange a showroom visit

Customer and staff agree a slot after checking availability. A booking is not a purchase.

Confirmed visit + staff owner

↓

FOLLOW-UP AGENT

Keep the conversation moving

Prepare an approved reminder or follow-up. Honour channel permission and opt-out rules.

Follow-up draft + lead status

Customer opts out?

Stop automated follow-ups and retain only what the approved retention policy permits.

ADS AGENT

Which source created the enquiry?

Connect campaign attribution to lead stages. Actual ad access and reliable tracking are future integration work.

→

OWNER AGENT

What needs attention?

Summarise enquiries, pending reviews and visits. A visit is never reported as a sale.

What this prototype demonstrates

Clickable departments, a scripted customer journey, staff review gates, exception paths and an illustrative owner summary.

What a live pilot would require

Approved inventory/pricing source, channel access, consent rules, staff ownership, booking integration, finance boundaries and an agreed test plan.
